

Courtenay Wind Farm, LLC (CWF) is committed to the safe and environmentally sound operation of its facilities and to the health and safety of the community that it is a part of. To these ends, CWF will:

- Develop and implement an Environmental, Health, and Safety Plan in coordination with local and state emergency management officials;
- Continue coordination with wildlife agencies such as the U.S. Fish and Wildlife Service and the North Dakota Dept. of Game and Fish;
- Maintain coordination with local units of government during the construction and operation of the facility to avoid and mitigate any conflicts that may occur;
- Develop, maintain and actively manage bird and bat conservation strategies as defined and discussed in the U.S. Fish and Wildlife Service's Land Based Wind Energy Guidelines published in 2011.

CWF will maintain a philosophy of openness and willingness to partner with landowners and community leaders throughout the development, construction and operation of the Courtenay Wind Farm. This openness allows CWF to identify environmental issues before they become problems.
